Sandwich station training

Le Yard Café & Sandwicherie · 140 Church Street, Tribeca

Version 0.16 · November 14, 2026 · Bench-trial recipes. Classic sandwich builds with a New York deli touch. Use the trial recipes for practice and tasting. Use signed recipes and current supplier specs for live service.

Set up before the first ticket

1. **Receive.** Check packages, supplier and lot identifiers, dates and refrigeration as required. Use only approved ready-to-eat products for this cold assembly drill. Set aside damaged, unidentified or out-of-temperature product, record it and notify the manager.
2. **Set the rail.** Check cold holding at **41°F (5°C) or below** for foods requiring temperature control, using a calibrated food thermometer. Keep backstock covered and refrigerated. Mark opened or prepped containers using the approved item-specific dates and storage procedure.
3. **Protect the food.** Wash hands before gloving and after handling the POS, phone, trash or other contamination sources. Use clean utensils or new food-grade gloves for ready-to-eat food. Wash, rinse, sanitize and air-dry tools and food-contact surfaces per the station procedure.
4. **Set the bench.** Stage the portion scale, board, bread knife, dedicated utensils, wraps and labels. Establish distinct containers and utensils for walnuts and pistachios. Keep both separate from the general line and confirm the current supplier labels are accessible.

Check that a batch can be traced

Label item, batch ID, prep/open time, preparer, approved discard time, storage and allergen revision. Link the supplier SKU and lot. Have a second person trace one unit.

Move the ticket through the station

Read → build → wrap → verify → hand off. Read the item, quantity and modifiers. Stop for a declared allergy or intolerance and get the manager’s confirmation before starting. Use the specified 10-inch baguette, check the wrap against the ticket, then hand off by name or order number. Use the supervisor’s procedure for delivery and catering packaging and cold holding.

Stop and call the manager for a missing label, unclear allergy accommodation, wrong build, unknown holding history or an out-of-temperature product. Keep the affected item out of service until the manager decides its disposition. NYC Health Code Article 81, §§81.07, 81.09 and 81.13

The Parisien & the Verger

Bench trials · One 10-inch baguette per sandwich. Filling weights are net, in grams.

GENERATED CONCEPT RENDER

Le Parisien

Trial recipe. French-style ham **72 g**, cultured butter **16 g**. **88 g filling.**

Prep drill. Stage thin slices of approved ready-to-eat ham and give cultured butter its own spreader. Keep both under the approved storage controls.

Build drill. Spread the butter across the cut crumb. Lay loose folds of ham from end to end, close and sleeve.

NYC touch. A classic jambon-beurre with 72 g of ham in full, thin deli folds that pull away cleanly.

Label check. Milk from cultured butter. Expect wheat in the baguette and check its supplier label; verify the ham's full ingredient and allergen statement.

GENERATED CONCEPT RENDER

Le Verger

Trial recipe. Brie **45 g**, crisp apple **40 g**, walnuts **14 g**, honey **8 g**. **107 g filling.**

Prep drill. Slice Brie and thinly slice washed apple. Keep coarsely chopped walnuts in a labeled container with a dedicated utensil.

Build drill. Lay Brie along the crumb, overlap the apple slices, distribute walnuts and finish with a fine honey drizzle. Close gently and sleeve.

NYC touch. Give the classic Brie and apple pairing a deli crunch with overlapping apple, coarse walnuts and a light honey finish.

Label check. Milk from Brie and tree nut (walnut). Expect wheat in the bread; verify both labels and any walnut-packer cross-contact statement.

Image credit Generated POS concept renders. Use the chef's approved build photo for portion, cut and presentation.

The Bellecour & the Bleu

Bench trials · One 10-inch baguette per sandwich. Filling weights are net, in grams.

GENERATED CONCEPT RENDER

Le Bellecour

Trial recipe. Brie **45 g**, drained roasted red peppers **38 g**, drained cornichons **18 g**, Dijon **10 g**. **111 g filling.**

Prep drill. Drain the peppers well and slice the drained cornichons lengthwise. Slice the Brie and give Dijon a dedicated spreader.

Build drill. Spread Dijon on the inner crumb, layer Brie and drained peppers, then distribute cornichons along the bread. Close and sleeve.

NYC touch. Bistro Brie gets a deli pickle snap from lengthwise cornichons. The drained peppers keep the crumb firm.

Label check. Milk from Brie and mustard from Dijon. Expect wheat in the bread; confirm the bread and all brand-specific condiment and pickle ingredients.

GENERATED CONCEPT RENDER

Le Bleu

Trial recipe. Danish blue cheese **38 g**, apple **42 g**, arugula **10 g**, honey **8 g**, pistachios **13 g**. **111 g filling.**

Prep drill. Stage washed, drained arugula and thin slices of washed apple. Portion the cheese and use a pistachio-only utensil for the coarse chop.

Build drill. Distribute blue cheese and apple along the bread. Add arugula, honey and pistachios, then close and sleeve.

NYC touch. Give the blue cheese and apple pairing an apple-forward crunch. Spread the cheese evenly and finish with coarse pistachios.

Label check. Milk from blue cheese and tree nut (pistachio). Expect wheat in the bread; verify the bread, blue cheese and nut-packer specifications.

Image credit Generated POS concept renders. Use the chef's approved build photo for portion, cut and presentation.

The Rustique & the Figaro

Bench trials · One 10-inch baguette per sandwich. Filling weights are net, in grams.

GENERATED CONCEPT RENDER

Le Rustique

Trial recipe. Coppa **58 g**, drained roasted red peppers **32 g**, drained cornichons **18 g**, Dijon **10 g**, arugula **12 g**. **130 g filling.**

Prep drill. Separate thin slices of approved ready-to-eat coppa. Drain the peppers, slice drained cornichons lengthwise, and wash and drain the arugula.

Build drill. Spread Dijon inside the baguette. Fold the coppa evenly along the crumb, then layer peppers, cornichons and arugula. Close and sleeve.

NYC touch. Fold the thin-cut coppa like deli meat. Run the drained peppers and lengthwise pickles the full length of the baguette.

Label check. Mustard from Dijon. Expect wheat in the bread; verify coppa ingredients and the labels for pickles, peppers and Dijon before answering a guest.

GENERATED CONCEPT RENDER

Le Figaro

Trial recipe. Prosciutto **55 g**, Brie **42 g**, fig preserves **12 g**, arugula **14 g**. **123 g filling.**

Prep drill. Separate approved ready-to-eat prosciutto slices, cut Brie and stage a dedicated utensil for fig preserves alongside washed, drained arugula.

Build drill. Spread a thin layer of fig preserves over the inner crumb. Lay Brie and loose prosciutto folds along the baguette, then tuck in the arugula. Close and sleeve.

NYC touch. Give the sweet-salty bistro build full deli folds and a peppery arugula finish.

Label check. Milk from Brie. Expect wheat in the bread; confirm the bread, pork and fig-preserve ingredients from the current labels.

Image credit Generated POS concept renders. Use the chef's approved build photo for portion, cut and presentation.

Prep six of a kind

Net component targets for six 10-inch test sandwiches. Keep components separate until assembly.

Sandwich	Weigh for six (net, ready to build)	Filling total	Trial prep budget
Le Parisien	Ham 432 g, cultured butter 96 g	528 g	5–8 min
Le Verger	Brie 270 g, apple 240 g, walnuts 84 g, honey 48 g	642 g	10–14 min
Le Bellecour	Brie 270 g, drained peppers 228 g, drained cornichons 108 g, Dijon 60 g	666 g	9–13 min
Le Bleu	Danish blue cheese 228 g, apple 252 g, arugula 60 g, honey 48 g, pistachios 78 g	666 g	12–16 min
Le Rustique	Coppa 348 g, drained peppers 192 g, drained cornichons 108 g, Dijon 60 g, arugula 72 g	780 g	11–15 min
Le Figaro	Prosciutto 330 g, Brie 252 g, fig preserves 72 g, arugula 84 g	738 g	8–12 min

Trial prep budget. One person at a clean, stocked bench with approved ready-to-eat meats. Time prep through labeling and storage. Time assembly and pack-out separately. For mixed batches, time shared prep once.

Measure edible yield

1. Stage six approved 10-inch baguette portions. Keep bread protected and split lengthwise at assembly. Weigh fillings after trim, draining or slicing. Record the as-received and usable weights for each ingredient.
2. Divide the usable total by the listed portion weight to calculate whole builds available. Use the lowest ingredient count as the batch yield. Keep different allergens in their own containers and label each batch before storage.
3. Build and wrap to order. Weigh the first three assemblies against the trial portion card. Have the chef test evenness, bread structure and packaging using the actual bread. Record losses when switching suppliers or cuts.

Check the cuts at the bench. Weigh the nuts after chopping and the pickles after draining. Compare three wrapped sandwiches with the approved reference photo. Record whether the folds reach both ends, the crumb stays firm and the fillings stay in place after unwrapping.

Taste the deli-style builds

Run a side-by-side tasting before choosing the final portions. Start with the listed bench recipes and change one portion at a time.

Set a consistent cut

- **Parisien, Rustique and Figaro.** Ask for thin slices. Fold the meat loosely and spread it to both ends so it pulls away cleanly when bitten.
- **Verger and Bleu.** Use the same thin apple cut for both. Overlap the slices to give each bite some crunch. Keep walnuts and pistachios in separate containers with separate utensils.
- **Bellecour and Rustique.** Slice the cornichons lengthwise and weigh them after draining. Drain the peppers before weighing so the bread stays firm in the wrap.

Compare two portions

1. **Parisien.** Build one with **72 g ham** and one with **80 g**. Keep cultured butter at **16 g** in both. Pick the version with even folds, a clean bite and a good balance of ham, butter and bread.
2. **Bellecour and Rustique.** Compare **18 g and 22 g drained cornichons** on each sandwich. Keep the Dijon at **10 g** and all other ingredients at their card weights. Look for a distinct pickle bite and a firm crumb.
3. **Wrap and taste.** Mark builds A and B, use the same bread and wrapping method, and taste them after the same mock handoff. Check both ends and the middle. Record any slipping filling, damp bread or dominant flavor.

Preferred build and why _____

Recheck _____

Chef's decision. If the preferred build changes a weight, record it on the sign-off worksheet. Recheck six-portion yield and time three builds at the new weight. Use the same product labels and lots for the comparison.

Recipe sign-off worksheet

Print one sheet per sandwich and record the weights from the actual 10-inch build.

Sandwich _____ Recipe revision _____ Trial date _____

Prep batch ID(s) _____ Prepared and weighed by _____

Tare the scale. Weigh the same batch before trim or draining and again after prep. Link each SKU to its label revision, dated label photo or supplier spec in the intake record.

Component	Exact supplier SKU	Label revision or dated evidence	Before prep (g)	Usable after prep (g)	Final per sandwich (g)
10-inch baguette					

Usable baguettes _____ Whole batch yield _____ Built and accepted _____

Divide usable grams by final grams per sandwich and round down for each filling. The lowest count across bread and fillings is the whole batch yield.

Limiting component or reason for loss _____

Approved build and wrap photo / checklist reference _____

Correction or follow-up _____

Decision [ ] Approve revision [ ] Repeat trial [ ] Hold **Effective date _____**

Chef _____ Manager _____ Date _____

File with the signed recipe and keep the SKU and label evidence in Operations Kitchen.

Allergy and intolerance orders

Read the ticket aloud to the assembler and resolve the request before touching ingredients.

Guest-to-kitchen procedure

1. **At the counter.** Ask which ingredient is involved. Mark the item and guest request on the ticket; say, “I’ll check the current ingredients and how we prepare it with the manager.”
2. **At the station.** The chef or manager checks the entire build against exact supplier SKUs, labels and shared equipment. Review cross-contact risks from bread, knives, boards, slicers, gloves, open bins and garnishes. Dough and bread from different suppliers can have different allergens.
3. **Build and handoff.** If the manager approves accommodation, clean the work area, wash hands, use new gloves and clean tools, and use verified ingredients from protected containers. Mark the wrap and have the handoff person match it to that ticket. Pause or decline if ingredients or shared-equipment risks cannot be resolved.
4. **If a guest appears to be having an allergic reaction.** Call 911 immediately, give the address (140 Church Street) and notify the manager. NYC Health staff poster

What the ingredient names tell us

Check labels and shared-line advisories for FDA’s nine major allergens: milk, eggs, fish, crustacean shellfish, tree nuts, wheat, peanuts, sesame and soybeans. Track mustard separately. Ask the supplier about cross-contact even when no precautionary statement appears. FDA food allergy guidance

Verify the sign, menu and order path

- Post the NYC staff signs in the languages workers speak. Keep **“If you have a food allergy or intolerance, please notify us.”** in the language of the menu.
- Run **Check Square allergen tags** in Operations Kitchen. After sign-off, press and hold the exact register tile. Check the signed names as well as the Square categories. Confirm wheat, walnut and pistachio from the labels. Check shared prep and cross-contact separately.
- After a Square item edit, recheck the item description, register tile and each guest menu against the signed reference.
- Rehearse Church Street direct pickup with a mock allergy note. Save the note and matching order reference from checkout, Square Order Manager and the printed kitchen ticket or KDS. Confirm the shift lead sees it before assembly. Repeat on each marketplace.
- Assemble and wrap to order in this drill. Apply approved major-allergen labels before selling food packed in advance. NYC signs · Square menu support · NYS §1357

Timing and counter drills

Bench-trial stopwatch goals for a stocked line and one uncomplicated sandwich per ticket.

Provisional goals Parisien within **60 seconds**, the other five within **90 seconds**, from build start to wrapped and checked. Aim for **3 minutes** from ticket in to verified ready. Pause for allergy or safety checks and log the reason.

Run three practice rounds

1. **Prep round.** Start at the first prep action for an assigned batch and stop when usable product is portioned, dated, stored and the station is reset. Record item, input quantity, usable yield, waste and elapsed time. Repeat with the approved bread and supplier packs.
2. **Assembly round.** Stage a ready station. Time three comparable builds per sandwich. Record all attempts and rework. Check ingredients, weight and presentation. If timed separately, measure pack-out from build check to wrapped and ready.
3. **Rush round.** Run mixed tickets with sandwiches, a coffee task and a simulated delivery handoff. Include a declared walnut or sesame allergy and an unavailable ingredient. Record holds and declines. For catering, count portions against the pack list and verify cold-chain steps.

Record each run

Ticket / item	Source	Ticket in	Build start	Wrapped / checked	Handoff	Issue / fix

Save the measurements. In Kitchen → Sandwich timing runs, enter people, attempts, accepted builds, elapsed seconds by phase and the worksheet reference. Leave prep and pack-out blank when untimed. Compare the 60- or 90-second goal to assembly plus pack-out for the same build when both phases were timed. Keep each ticket's time to ready and courier wait on the worksheet.

Coach's check Correct item and modifiers; clean handling; portion and build match the signed card; correct wrap and handoff. A food-safety or allergy miss requires coaching and a repeat before sign-off.

Storage and discard register

Copy one line per supplier SKU. Enter actual time, temperature and date rules before releasing the register.

Component	Sealed or as received	After opening, slicing or prep	Approved opened / prepped limit
Baguette	Record supplier/date, lot and storage spec.	Keep covered. Split at order and check crust and crumb.	_____ / _____
French-style ham	Record supplier use-by, lot, pack and refrigeration.	Record open and slice times. Stage small cold portions.	_____ / _____
Coppa and prosciutto	Verify each SKU's ready-to-eat and refrigeration directions.	Record open/slice times. Separate the cured meats; use small batches.	_____ / _____
Cultured butter	Record supplier use-by, lot and storage directions.	Note opening and portioning. Use a clean, dedicated spreader.	_____ / _____
Brie and Danish blue	Record each cheese's supplier date, lot and cold spec.	Record opening and cutting. Cover and stage separately.	_____ / _____
Apples and arugula	Record delivery or printed use-by, lot and pack instructions.	Record wash/slice or open time. Keep covered. Cut apples in small batches.	_____ / _____
Roasted peppers and cornichons	Record each jar's date, lot and sealed conditions.	Confirm refrigeration and brine instructions. Log drain/slice time for the small working batch.	_____ / _____
Dijon, fig preserves and honey	Record each SKU's date, lot and storage spec.	Follow each after-open direction. Date opened jars and use clean dedicated utensils.	_____ / _____
Walnuts and pistachios	Record dates, lots and supplier allergen statements.	Label separately. Note opening and chopping and keep sealed with dedicated utensils.	_____ / _____

Cold assembly only. This register has no on-site cooking or cooling step. Keep foods requiring temperature control at **41°F (5°C) or below** and follow any stricter product instructions. Stage limited quantities during rehearsal and evaluate quality separately. Do not extend the original clock when transferring containers.

At opening and handoff. In Kitchen, record the exact lot, real handling time and approved discard deadline. Mark the container with that deadline. Check **Open batches by discard time**. Remove product at its deadline, then choose **Record discard**. Choose **Record used up** when the batch runs out before its deadline. Ask a lead to correct a label error. NYC Food Protection Manual

Catering prep handoff

Use the approved event orders, the Kitchen worksheet and the pack list together.

Manager publishes the plan

1. Open Operations Catering. Confirm the job and service date. Check the agreed quantities, latest Square invoice evidence and pickup or delivery arrangements.
2. Enter whole sandwich quantities under **Kitchen portions**. Save a draft if the order is still changing. Select **Publish to Kitchen** once you have reviewed the counts. Changes to quantities, service date or stage can withdraw an earlier handoff. Recheck and publish again after a change.

Chef checks available portions

1. Open the service date in Operations Kitchen and check counts against each pack list. Finish any pending supplier or recipe review before starting prep.
2. Open **Bench estimate** for a rehearsal. **3 Parisien, 6 Verger and 1 Bleu** use **10 baguettes**, **282 g usable apple**, **84 g walnuts** and **13 g pistachios**. Allow about **14 minutes of assembly** at a stocked station.
3. Use **Signed usable ingredient totals** for service. Check measured availability, batch labels and the approved discard time. Use measured yield to calculate how much to pull or buy. Time prep and pack-out separately.

Pack and check each order

- Keep each job’s packs together. Check counts, exact varieties, approved allergy handling and any serving labels against that job’s pack list.
- Have a second person check the complete order, temperature and handoff record. Record the pickup or delivery reference and escalate any mismatch to the manager.

Rehearsal check. The manager and chef agree on the worksheet total. The chef records usable yield, assembly and pack-out time. The team repeats the handoff if any pack, allergy instruction or storage check is missed. NYC Health Code Article 81

Try a shared ingredient shortage

Open **Sandwich portion feasibility** in Operations Kitchen. With no catering due, enter 200 g of usable apple and ample quantities of the other ingredients. Enter **3 Verger and 2 Bleu** and see the **4 g apple shortage**. Count any usable apple still reserved for published catering.

Keep the station guide current

The chef owns the recipe. The manager owns label evidence, training release and the customer menu.

Before using the recipes for live service

- **Chef** completes one **Recipe sign-off worksheet** per sandwich, confirms the portions on the current 10-inch bread, and approves build order, packaging and reference photos. Record approved storage and time limits with the person in charge. November 5 half-baguette builds informed these house trial quantities.
- **Manager** files label sources in Kitchen. Match the exact pack to its SKU and record label ingredients, cross-contact and storage rules. Put mismatched or unresolved ingredients on hold. Open **Sandwich evidence by recipe** to see which builds use them.
- **Chef and manager** record the worksheet reference and measured quantities in **Kitchen → Chef signoff for sandwich recipes**. Assign an effective date and post the approved revision at the line. When a supplier label changes, review the new label and sign a fresh recipe revision. Verify Square POS and each ordering channel against the signed matrix.
- **Shift lead** reviews the **Church Street first-shift Square rehearsal** draft in Tasks & SOPs. After publishing, start a run and log evidence from the register, kitchen ticket, and each approved channel. Leave pending checks assigned to an owner. Record the shift decision by channel.
